

BOLT FOOD: TAKE HOME SALES → AM HANDOVER REDESIGN

Flowchart Link: ([here](#))

MVP: <https://boltfoodha-rs4taym3.manus.space>

The handover isn't broken because people aren't trying, it's structurally designed to fail, as the system rewards the wrong behavior. Sales Managers get paid to close deals, but it seems it is not included to generate a strong lifecycle performance for the merchants. Given that, Account Managers inherit promises they can't see, and they do not receive any kind of information about goals or competitor situation these merchants are facing. As a result, merchants churn because what they heard on the call doesn't match what shows up in their account.

Putting some numbers:

- Imagine a 1,000 SMB handovers/month, with 38% missing critical information and 28% of those merchants escalating
- 280 escalations/month × 10€/escalation (2 support tickets of 5€/each) = 33.6k €/year wasted due to lack of information;
- Considering 28 partners/month churn from broken promises with a 3.78k € LTV (one year) = 1.27M €/year lost revenue
- **Total bleeding: €1.3M annually**

Some root causes:

#1: Misaligned Incentives: Sales Managers (SMs) are compensated on deal closure, not handover quality. Given that, the AM's retention problem doesn't impact the SM's

#2: Information Entropy: Commercial terms negotiated verbally (calls, WhatsApp), captured inconsistently in Salesforce lost during the handover to AMs. 38% of SMB handovers prove the current process can't preserve information.

#3: One-Size-Fits-All Process: SMB needs a near-zero-touch automation, given the volume. However, enterprise companies need white-glove service, as relationship matters in this case. The current one-size-fits-all fails in both cases.

#4: Zero Organizational Learning: No feedback loop from failures to training. Sales managers struggling with objections get no coaching because the system doesn't track where specific agents fail.

ADOPTION PLAN

To implement this project, we will not focus on asking SMs to "fill more fields" triggers resistance, as compliance-by-force fails. Our focus is to make it inevitably the easiest path

For Sales Managers:

- **AI will do the work** - SM will speak naturally. The AI inserted in the calling tool will transcribe as structured data. SM will need only reviews (in some cases), but not to rewrite the whole topics discussed.
- **Hard Gates protecting SM** - The system will not generate a contract without validated data. It will prevent embarrassing partner promises and will make handover easier.
- **Faster commission**: Delivering a clean handover, we will be able to make the partner live faster. It will help SM to reach the quota faster, with direct impact on their earnings.
- **Visible consequences**: After a 2-week grace period, "Clean Handover Score" should be used as an important metric on SM commissions, rewarding good behaviours.

For Account Managers:

- **30-40% time savings**: No more time trying to understand data on about the deal on the CRM. More time for support the growth of the merchant.
- **Better first impressions**: Merchants will receive instant WhatsApp/email confirmation through the CRM, decreasing angry calls for lack of visibility.
- **Proactive tools**: Alerts to merchant performance, enabling intervention before churn.

Rollout Strategy:

- **Days 1-30 (Pilot)**: Estonia only, SMB only, 5 Champion SMs + 3 AMs
 - How success should look:
 - AI extraction accuracy >90% on 100 Estonia SMB handovers;
 - Zero critical bugs causing revenue impact
 - Sales Co-Pilot used in >50% of calls
 - **Go/No-Go Decision**: Proceed to regional expansion or iterate
- **Days 31-60 (Regional)**: Add 3 markets with reliable data and activate commission incentive
 - How success should look:
 - 20% reduction in "broken promise" escalations (28% → 22%);
 - Geofence Intelligence used pre-call in >80% of leads;
 - Franchise detection working (if Master exists, franchisee inherits terms);
 - Commission incentive activated, Clean Handover Score visible to all SMs;
 - **Checkpoint**: If <50% of target improvement, trigger contingency plan (root cause analysis)
- **Days 61-90 (Full Scale)**: Rollout by data quality (Tier 1: clean data, Tier 2: moderate, Tier 3: requires cleanup)
 - How success should look:
 - 70% of SMB partners achieve TT21 <21 days
 - Escalations down to <15% (from 28%)
 - 85% of handovers zero-touch (no human review)
 - 8+ markets live with consistent performance
 - **Success Criteria Met**: Full rollout to remaining Tier 3 markets approved
